

Converting Solutions for Film & Flexible Packaging

Engineered for Demanding Applications,
Designed for 24/7 Performance

At Catbridge, we design and manufacture high-throughput converting machines tailored to the needs of film and flexible packaging converters. From **primary films to multi-layer laminations**, our slitter rewinders are built to meet the challenges of modern converting—delivering speed, control, and consistent roll quality, shift after shift.

Converting Machines for Film & FlexPack

Whether you're running high-volume industrial films or intricate flexible packaging substrates, **Catbridge machines** are engineered for **reliability, repeatability, and efficient job changeovers.**

Our systems are trusted by converters who run 24/7 operations and need equipment that can keep up.

Turret Slitter Rewinders

When uptime is critical and productivity is paramount, Catbridge turret winders deliver. The FP (Flexible Packaging) versions of our turret machines are optimized for precise tension control, fast transfer cycles, and consistent output.

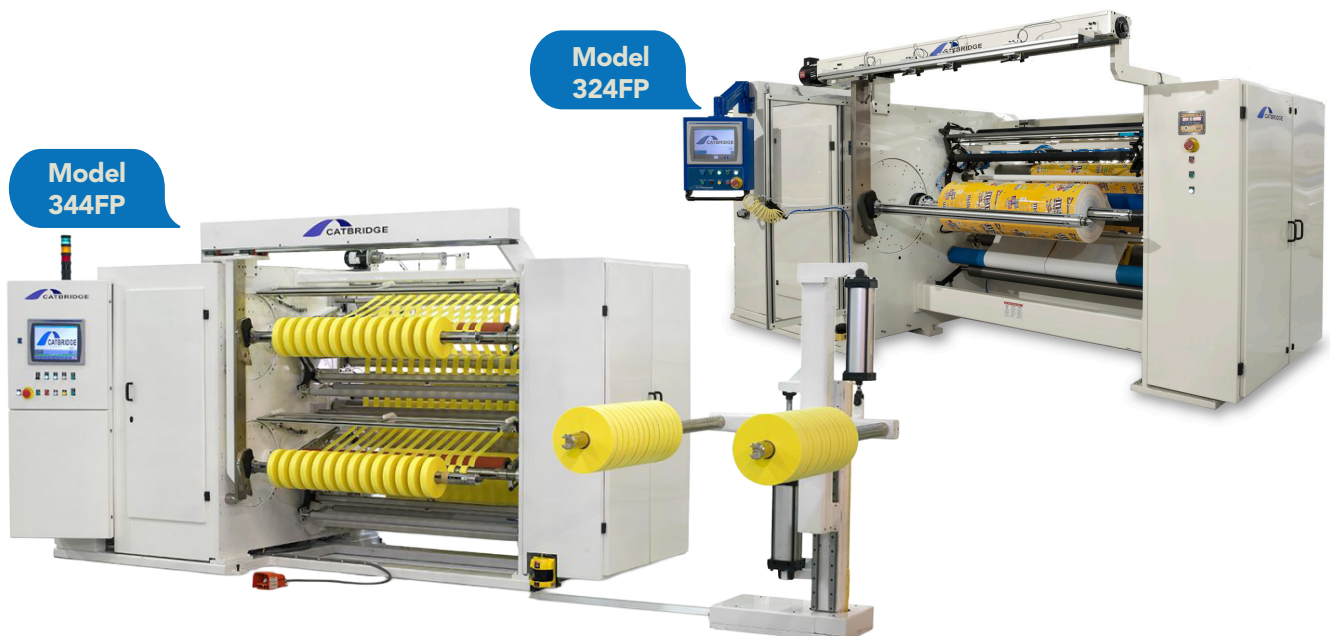

Key Models:

324FP SINGLE-TURRET SLITTER REWINDER

Compact, single-turret system engineered for high-efficiency film converting. ***Ideal for short- and long-term jobs with repetitive, short sets.***

344FP SINGLE-TURRET SLITTER REWINDER

Expanded turret system designed for heavier rolls and more demanding applications. ***Ideal for industries with high volume, repetitive work.***

Duplex Slitter Rewinders

Our 900 Series duplex winders have become an industry standard for film and flexpack applications, combining speed, tension precision, and advanced automation.

Popular Models:

900 DUPLEX CENTER SLITTER REWINDER

Highly customizable and versatile for a wide range of web types and job requirements.

Ideal for narrow web slitting, the Model 900 can be configured for a broad variety of applications and repetitive work.

900-M DUPLEX CENTER SLITTER REWINDER

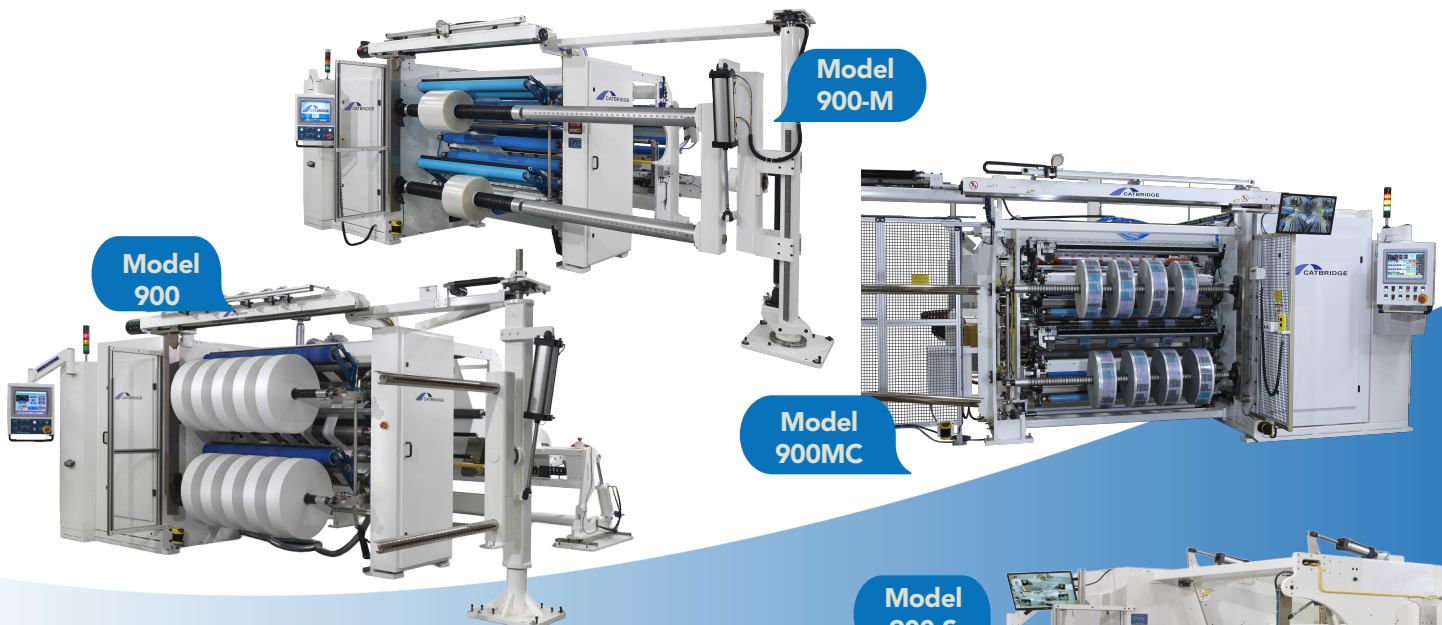

Speeds up to 2500 fpm, 32" rewind diameter, auto knife positioning, closed-loop tension control, and automatic roll discharge.

Ideal for those looking for a plug-and-play system that offers a range of features, boosting productivity.

900MC DUPLEX CENTER SLITTER REWINDER

A hybrid design that offers turret-like benefits with the simplicity of a duplex, ideal for faster changeovers.

Ideal for converters needing increased productivity with features that minimize downtime and maximize efficiency.

Single-Shaft Slitter Rewinders

900-S SINGLE-SHAFT SLITTER REWINDER

The 900-S is a cantilevered simplex winder for films and laminations up to 45". Its single-shaft design speeds up cycles and makes operator tasks easier.

Ideal for large-diameter jobs requiring fast, ergonomic changeovers, with a single-shaft design that simplifies prep and run time.

Engineered Advantages

High-Speed Throughput

Machines rated up to 2500 fpm

Tension Accuracy

Closed-loop and differential winding systems

Setup Efficiency

Automatic knife positioning, core placement and roll discharge

Static Control

Integrated neutralizing systems to manage static in high-speed film lines

Flexibility

Each machine can be configured to meet your unique film specs, layouts, and operator preferences

Made in the USA. Trusted Worldwide.

Every Catbridge machine is proudly designed, manufactured, and tested in-house at our New Jersey facility.

With a commitment to performance and long-term partnership, we're ready to help you improve throughput, reduce downtime, and produce quality rolls—job after job.

Let's talk about what you're running and how we can help.
